

Design and Technology

Year 2 have been developing their practical skills by practising their finger fluency in DT. They have designed and made an untuned instrument. After evaluating they made any improvements needed.

Moving forward from Year 2, the children now in Year 3, have built on their knowledge by strengthening their finger fluency skills in DT. They did this by completing all the preparation to make vegetable soup. They used skills such as, chopping, peeling, juicing, and crushing various fruit and vegetables. The children were all very careful when handling the utensils needed and remembered to wash their hands before handling the food.

Following on from using their finger fluency skills in Year 3, Year 4 have progressed and are now mastering their abilities. They can now perform intricate work with syringes and tubes in preparation for making a pneumatic toy.
