# Computing

Year 6 have designed and started to create their own website using Google Sites. Children have been exploring how to build and add/edit their own webpages, add pictures – following copyright protocols, URL links, maps, videos, carousel photos and much more.

The children in Year 3 created flip book animations using post it notes. They then used Stop Motion to create their own whiteboard animations using 4 frames.

After reviewing some videos, Year 5 used story boards to plan their own video. They thought about their audience and the purpose of their video then planned framing, filming techniques and a script.
